The JBC center

A baby center called "junior baby center " (JBC) runs a babysitting service.

As a software developer you are required to help to design and developed a web application to help the center in computerize their business operations.

The center has employees and clubs; morning, afternoon, evening and night clubs.

Each club is headed by one supervisor, customers call in to request for a sitter, the request is received by supervisor who assign a sitter to sit for customer from a list of sitters for a particular day requested

Major activities involved:

- Customers call in to request an appointment
- Supervisor checks to see if the customer is registered and enters the appointment in the system
- The supervisor finds a sitter to take the appointment
- The club sends a confirmation to the employee and the customer
- Once the engagement is complete club bills customer.

Billing details

Each child is paying 8500/= per two hours for each club apart from night club which is 12000/=

System functionality

- An official should login
- An official should register all users and registration can be canceled.once canceled form should be reset.
- An official should see all the totals for payments(all information from the appointments)

- Club supervisors should make appointments; Names of the parent(customer), customer id, time, child name, club requested, sitter assigned, payment-the bill etc.
- An appointment can be canceled
- Sitters should see all names of the children and their parents assigned to them but not the billing information
- Sitters have IDs with two letters represents the club they belong..eg   MO1221..id is in capital letters only must be 6.
- Whoever login should logout
- Each kid is given an ID where two letters represent the club, two letters represent a day, the rest are numbers they must be 7.

Business rules:

All sitters names are not more than 45 characters.

The the username is an email
